PROFESSIONAL EXPERIENCE

Laboratory Analyst (part time)

SGS 

07/2025 – Ongoing
Hoogvliet,
Netherlands

Case Study Researcher (Full time)

UNICEF 

12/2025 – 02/2026
The Hague,
Netherlands

- Engineered composite features from donor survey data (Trust, Impact, Financial Capacity) and built an XGBoost model to predict NPS across 5,300 donors.
- Identified 176 high-risk donors (3.3% of total) through segmentation; designed and tested 3 AI-simulated intervention strategies to predict impact on donor sentiment.

Sales Agent

June Homes - US Real Estate Startup with over \$50million in funding 

08/2023 – 07/2025
Athens, Greece

- Guided 300+ applicants from initial inquiry to lease signing in the first year, consistently meeting and exceeding monthly targets.
- Conducted virtual tours for properties located in Boston, MA, showcasing units to prospective clients.
- Coordinated with the Business Department and Analytics to provide feedback on newly acquired units.
- Trained and onboarded 4 new agents.

Mandatory Military Service

11/2022 – 08/2023
Kos, Greece

Business Analyst Intern

Ideal Bikes - Bike manufacturing and exporting company 

07/2022 – 09/2022
Patras, Greece

- Structured sales notes into weekly Excel reports, analysing product performance and in-store location vs. sales trends.
- Cleaned and migrated data into Entersoft CRM/ERP system via CSV.

PROJECTS

Academic Failure Prediction

Built Random Forest classifiers in R to predict student failure risk (n=1,044), achieving balanced accuracy of 0.70 after threshold adjustment. Applied SHAP to identify key drivers of failure risk.

MSc Thesis - Spotify Context-Switching Behavior (on-going)

Using Survival Analysis to model time-to-switch between Spotify listening contexts. Applying Hidden Markov Models to predict which context a listener switches to next.

E-commerce Performance Dashboard

Built a measurement framework in BigQuery and Looker Studio analyzing 257,000 website visitors across the holiday season, covering funnel drop-off, revenue by channel, product and country.

Obesity Risk Classification

Built a Random Forest classifier to predict obesity risk from behavioral and lifestyle data, achieving 90% accuracy (balanced accuracy 0.91–0.96). Applied SHAP and LIME to explain individual-level predictions and identify key risk drivers.

Amazon Review Analysis & LLM Fine-tuning

Analysed 7,000 Amazon food reviews using Word2Vec embeddings, BERTopic for topic discovery, and VADER for sentiment scoring. Fine-tuned BERT and benchmarked GPT-3.5 across zero, one, and few-shot prompting strategies. GPT-3.5 zero-shot reached 93.8% accuracy; BERT fine-tuned to 83.0%.
